

# Student Helper in Electric Fish Lab

Biology laboratory that studies South American electric fish is seeking student helpers for summer 2025 and continuing in the fall. The fish studied in the lab are not dangerous and produce very weak electrical fields to navigate and to communicate. We study the neural and hormonal mechanisms of generating and detecting electrical communication signals. Duties will include helping to maintain large, multi-tank aquarium systems and general lab maintenance (glassware washing, chemical inventories, maintaining laboratory equipment, etc.). Work over holiday breaks during the academic year is expected.

Send an E-mail message to the Smith Lab ([troy.smith.lab@gmail.com](mailto:troy.smith.lab@gmail.com)) for more details or to apply for the job.
