## Seminar in Animal-Computer Interaction

INFO 400/590 (I400 by permission: [cnippert@indiana.edu](mailto:cnippert@indiana.edu))

Tuesday evenings, 5:45PM-8:15PM

Christena Nippert-Eng, Professor of Informatics

...A readings and discussion seminar on this dynamic, emergent field.

This exploratory seminar will serve as an introduction to ACI. Together, we will draw on faculty and student-selected readings, multimedia materials, and guest lectures from current ACI designers/researchers/practitioners to see what we think about the ethics, history, state-of-the-art, and possible futures for this broad field of practice. We will focus our interest on four emerging areas, including Maker applications for animals, automated quality of life data capture and analysis for captive animal health and wellness; wildlife tracking and monitoring; and animal cognition.
